Compile and Build Program AB

Program AB defines a Java package called org.alicebot.ab. The source files are stored in src/org/alicebot/ab. One additional class, src/Main.java is provided as well.

Program AB was developed as a project in JetBrains IntelliJ IDEA. The distribution includes the module file Ab.iml and the .idea directory.

Memory Optimizations

Memory optimizations used in Program AB, including AIMLIF format, Node promotions, and Shortcuts, are described in a companion document.

Java libraries needed to compile Program AB

Some Java libraries are needed to compile Program AB. These libraries are not included in this source code distribution.
